## Guidance on completing General Risk Assessment

### Table A

**Those affected:** Any person who may be affected by the work must be identified. Should there be categories of persons not listed, enter them in the boxes provided.

### Table B

**Hazards:** Identify the hazards inherent to the activity being assessed, by putting crosses in the appropriate boxes. The list provided is not comprehensive. Should there be hazards that are not listed then enter them in the boxes provided.

**Note:** The definition of a **HAZARD** is: something with the potential to cause harm.

### Table C

**Hazards:** List the hazards identified in Table B

**Existing Control Measures:** Outline the existing measures which will reduce the risk arising from each of the hazards listed. Check that they meet legal requirements, industry standards and represent good practice.

Typical control measures include: safe design; preventing access to the hazard e.g. guarding; written procedures and instructions; training; provision of PPE etc.

### Risk

Assess the risks arising from the hazards identified, using the criteria set out below. Consideration must be given to what is reasonably foreseeable in relation to the identified hazards and recognition of any existing control measures that reduce the risk. Enter the appropriate letter, L for low, M for medium or H for high. If the overall risk category is low, then the assessment is complete and the form circulated to those affected. However if the overall risk category is medium or high, then Additional Control Measures are required (see below).

**Note:** The definition of a **RISK** is: the likelihood that harm from a particular hazard will occur and the consequences.

MATRIX	LIKELIHOOD		
	Certain or near certain to occur	Reasonably likely to occur	Unlikely to occur
Fatality; major injury or illness causing long term disability	HIGH	HIGH	MEDIUM
Injury or illness causing short term disability	HIGH	MEDIUM	LOW
Other injury or illness	MEDIUM	LOW	LOW
